Speakers Time

Speakers Time is ideal for programming, timing and displaying the time of intervention of the speakers (minutes:seconds). It is mostly recommended for meeting rooms, conferences, parliaments and wherever a operator should limit the duration of speeches in a discussion.

FAST DEPLOYEMENT

You just need power supply and WiFi connectivity from your touchscreen device to your monitors devices.

MULTIMONITORS

Connect as many monitors you like and choose if they will display speakers' timmings, speakers list or presenter's screen.

LIGHT WEIGHTED APP

Run any other Windows Application simultaeous and without any interfears.

YOUR PRESENTER

Present Voting Results, infographics, Statistics, etc. from your 3rd party application without worrings.

Speakers Time is a light weighted windows software application, managing and presenting the available and running Speaker' timings and Presenter's desktop screen to Hall Displays Monitors.

With **Speakers Time** the operator will submit the available time for each speaker and the forwards or backwards counting will start on operator's demand. During the speech the operator may PAUSE the counting or/and END it.

The available and running time is displayed on the Hall's large screens. The connectivity status of the display points is always available offering a ZERO administration environment for the operator.

In advance, **Speakers Time** makes presentation and education as visual as it would be in person.

You can present a design, document, or website exactly as it displays on your screen—while it's happening to the chosen Hall Displays Monitors. **Now you may present voting results, statistics, infographics from your 3rd party application without worrings.**

Speakers Management, who is speaking now, who is next, will be simple, fast and an awesome experience from your touchscreen Laptop, Tablet or/and desktop computer.

Service Features and Benefits

This is where the magic happens. Save speakers names, control the countdown time and setup some presets – you´re done. The monitors will connect automatically, if networking is turned on.

Visualisation of the running speaking time on the screen and photo with details about the speaking speaker.

Control multiple independent monitors from a single broker instance. Think about having multiple breakout sessions during a conference. You can control their content from your central control booth.
